# Modernizing Security Operations at Beyond Finance with RapDev's Managed SOC

Delivering ROI through 73% Cloud SIEM noise reduction, 30+ rebuilt detection playbooks, and fully automated phishing triage

## Turning an alert backlog into an engineered detection program

| Challenge & Technical Solution | Business Impact | |
|---|---|---|
| Audited rules & retired overlaps, removing duplicate detections that buried threats behind repeat alerts | **73%** | fewer Cloud SIEM alerts, freeing SOC capacity |
| Targeted suppressions & index-level filtering tamed benign host & container noise that flooded Workload Protection | **95%** | drop in Workload Protection alerts, easing analyst fatigue |
| Retuned AppSec detections to the true surface, fixing scanners & synthetic tests that masked real attacks | **99%** | less App & API Protection noise, surfacing real attacks faster |
| Rebuilt playbooks & set a 15-minute path for critical paths missing playbooks & escalation clock | **30+** | critical playbooks rebuilt, cutting criticals from 136 to 7 per cycle |
| Automated enrichment & case closure for routine phishing that consumed analyst hours with manual validation | **100%** | of routine phishing analysis automated |

> " The partnership helped us move from reactive noise management to proactive signal optimization. That is the real path to a scalable security approach."
