

5 Signs You Need ServiceNow SI Control Tower

Every enterprise adopting AI deals with hidden risks: unsanctioned agents, unenforced policies, and untraceable actions. **RapDev's SI Control Tower deployment enables you to discover AI assets across your platforms, govern them in one place, and trace what your agents do.**

See which of these 5 signs apply to you

10 - 15 Checks	5 - 9 Checks	1 - 4 Checks
Your AI is outrunning your governance.	You have governance gaps worth closing now.	Your AI footprint is manageable today.
Talk to our experts today.	Let us map your governance framework onto SI Control Tower.	Revisit SI Control Tower as agents grow.
Strong fit	You'd benefit from it	You might not need it yet

1 You don't know how many AI agents you are running	☐ Teams adopt AI faster than anyone can inventory it	☐ Third-party agents run outside any central record	☐ AI assets have no named owner
2 Your governance lives in docs (not in workflows)	☐ AI policies exist, but nothing enforces them	☐ Agent requests move through email and spreadsheets	☐ Risk tiers exist, but no workflow applies them
3 You can't trace what your AI did	☐ No single trail shows what each agent did	☐ Agent activity sits in separate vendor logs	☐ Investigating an agent incident means manual digging
4 You can't see what your agents can access	☐ Agents reach sensitive data with no central review	☐ Agent and MCP server access goes unmanaged	☐ Security reviews slow every new agent launch
5 Governance blocks you from scaling agents	☐ Leaders want more agents, but risk teams hold back	☐ Pilots stall waiting on risk and security review	☐ You can't show what your AI investments return
